Joseph Paisie, Chief
Technical Analysis Section *Joseph W. Paisie*

This TSD addendum discusses several SIP revisions that were submitted for parallel processing with the boiler rules on March 13, 1986, but were not addressed in the initial TSD dated July 16, 1986. These SIP revisions are minor corrections and clarifications to Sections 201.102, 201.103, and 211.121.

Description of changes

Section 201.102 Definitions

The definition of "PSD Increment" was modified to be consistent with Federal regulations. An error in the definition of "Specified Air Contaminant" was corrected.

Section 201.103 Abbreviations and Units

This Section was changed so that mm and M both mean million; and btu and Btu both mean British thermal units at 60 degrees Fahrenheit. Previously, btu was the abbreviation for British thermal units and mmbtu/hr was the abbreviation for million British thermal units per hour. The changes were made because MBtu, mmBtu and mmbtu are all used to denote million British thermal units throughout Illinois' rules.

Section 211.121 Other Definitions

A typographical error was corrected.

Recommendation

It is recommended that these minor SIP revisions be approved.
